PLANNING BOARD RECOMMENDS:

DISAPPROVAL

EXPLANATION:

With the exception of the fence height request, the proposed variances grossly exceed the requirements of the Town of Stafford's Zoning Law. Granting of such large variances by the Town's Zoning Board of Appeals (ZBA) may undermine the local law adopted by the Town Board, and set a precedent for future applications. In addition, the application requests a "variance" from the Real Property Value Protection clause of the law. Since this is not a use or dimensional requirement, it is questionable as to whether the ZBA can grant such a waiver. It is recommended that the applicant request amendments to the Town's Solar Law to the Town Board instead of seeking variances from the ZBA especially given that Stafford's solar regulations differ significantly from other towns in Genesee County.

Re: **NY CDG Genesee 6 LLC Solar Project- 8244 Batavia-Stafford Townline Rd, Batavia, NY 14020**

Dear Mr. Wood:

On behalf of NY CDG Genesee 6 LLC /BW Solar, LaBella Associates, D.P.C. respectfully submits this Site Plan Application for a proposed solar array to be located at 8244 Batavia-Stafford Townline Road in the Town of Stafford.

NY CDG Genesee 6, LLC is proposing the construction of an approximately five (5) MW-AC Photovoltaic Array on approximately 28.32 acres of two project parcel(s) totaling approximately 127.5 acres of Industrial Park zoned land. (Tax ID: 01-02-117.1 and Tax ID: 01-02-115)

The project includes the installation of approximately 676 freestanding, tracking solar tables consisting of about 13,520 modules/panels. The structures will stand approximately 12 feet in height and be anchored into the ground using helix screws or H-piles.

The array will also include new electrical equipment, concrete pads for equipment, low-growth pollinator-friendly seed mix underneath the solar tables, and a new gravel access drive. The site will be screened from adjacent parcels by a combination of existing hedgerows/vegetation and a proposed landscaping buffer on the exterior of the array. There are 2.6 acres of tree clearing anticipated, and about 0.1 acres of new impervious surface will be created.

The array will be seeking the following zoning variances for setbacks as itemized below.

- **Section 143-7.C.(1): Setbacks.** *To provide for at least minimal operational safety for persons and property located outside an SEF, all SEF's shall comply with the following: 1,000 feet from residential property lines*, 200 feet from nonresidential property lines*, highway right-of-way, and maximum height of 20 feet**.*

  Setback Variance Request 1: Reduction of 200' setback from nonresidential property line to 100' for a section of the northern property line of the Genesee 6 project parcel.

  Setback Variance Request 2: Reduction of 200' setback from nonresidential property line to 100' for a portion of the southern property line separating Genesee 6 project parcel Lands of Brian C. Thompson.

Setback Variance Request 3: Reduction of 200' setback from nonresidential property line to 50' for a portion of the southeastern property line adjacent to the lands of New York Central Lines, LLC.

Setback Variance Request 4: Reduction of 200' setback from nonresidential property line to 0' for a portion of the northwestern property line adjacent to lands of Michelle Wood, and proposed lands of the Genesee 5 solar array.

Setback Variance Request 5: Reduction of 1,000' setback from residential property lines to 75' for the entirety of the project area.

- **Section 82-4:** *Fence Height limitations in rear, front and side yards. No fence shall be more than six feet in height at the rear yard or side yard of the homes or buildings situated in the Town of Stafford. No fence or portions of a fence shall be higher than three feet in any front yard for a distance 33 feet from the road right of way.*

Fence Height Variance 1: As per National Electric Code Section 110.31, "*...For installations other than equipment as described in 110.31(d), a wall, screen, or fence shall be used to enclose outdoor electrical installation to deter access by persons who are not qualified. A fence shall not be less than 2.1 m (7 ft) in height or a combination of 1.8 m (6 ft) or more of fence fabric and a 300 mm (1 ft) or more extension utilizing three or more strands of barbed wire or equivalent.*" Therefore, we are requesting a variance to install a 7' high chain-link fence.

- **Section 143-7.E: SEF Real Property Value Protection Plan.** *The SEF applicant/owner/operator shall assure the Town of Stafford that there will be no loss in real property value for any property within 2,500 feet of the SEF. To legally support this claim, the applicant/owner/operator shall consent in writing to a real property value protection agreement as a condition of approval for the SEF. This agreement shall provide assurance to nonparticipating real property owners (i.e. those with no solar facilities on their property) near the SEF, that they have some protection from SEF-related real property value losses. A study must be made based on information for the Town of Stafford."*

SEF Real Property Value Protection Plan Variance Request 1: The condition is very unusual and one that we respectively submit is overly excessive. The application of this condition in this instance would likely have the effect of making the project untenable. In our opinion it would be extremely difficult, if not impossible, to finance a solar project that were subject to this condition. It is our experience that property values are not negatively affected by solar facilities, and in this case there does not exist any home or dwelling that is immediately adjoining the property where the solar project is proposed. We are also not aware of the existence of a similar condition in the any other local in the State of New York. Therefore, we are requesting a variance to have Section 143-7.E: SEF Real Property Value Protection Plan be removed as a qualification for this projects approval.

Along with Site Plan approval from the Planning Board, the following approvals are anticipated:

- Town Board – PILOT Agreement
- County IDA - PILOT Agreement
- NYSERDA – Funding
- SHPO - Sign-off
- NYSDEC – Stormwater Pollution and Prevention Plan

- US Army Corps - Wetland jurisdictional determination
- Genesee County Planning Board: 239-m review
- Zoning Board of Appeals Variance Approval
- Town Code Enforcement – Building Permit

We submit the following for your review and consideration:

- Letter of Intent
- Project Applications (Building Permit, Special Use Permit and Zoning Variance Permit)
- Project Summary
- Project Inventory
- Project Vicinity Map
- Civil Site Plans
- Redacted Lease Options
- Operation and Maintenance Plan (Including High-Wind Stand-Down Plan)
- Decommissioning Plan
- SEF Indemnification Provision
- NYS-SEQR
- Project Zoning Map
- Zoning Area Variance Request
- Agricultural Data Statement

We look forward to presentation of the project at the November 8th, 2021 meeting. If you have any questions or require any additional information, please do not hesitate to contact me at (570) 220-1845.

Respectfully submitted,

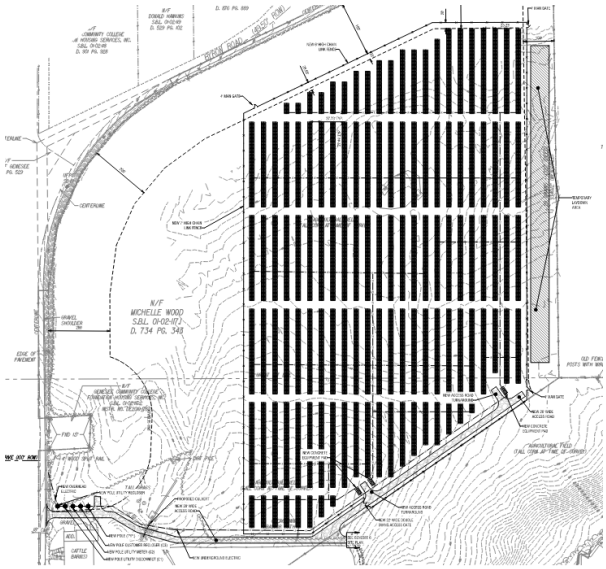
Genesee 5 (5.0 MW AC) Community Solar

Project Summary

8244 Batavia-Stafford Townline Road, Batavia, NY 14020



Project Summary

NY CDG Genesee 6, LLC is proposing the construction of an approximately five (5) MW-AC Photovoltaic Array on approximately 28.32 acres of two project parcel(s) totaling approximately 127.5 acres of Industrial Park zoned land. (Tax ID: 01-02-117.1 and Tax ID: 01-02-115)

The project includes the installation of approximately 676 freestanding, tracking solar tables consisting of about 13,520 modules/panels. The structures will stand approximately 12 feet in height and be anchored into the ground using helix screws or H-piles.

The array will also include new electrical equipment, concrete pads for equipment, low-growth pollinator-friendly seed mix underneath the solar tables, and a new gravel access drive. The site will be screened from adjacent parcels by a combination of existing hedgerows/vegetation and a proposed landscaping buffer on the exterior of the array. There are 2.6 acres of tree clearing anticipated, and about 0.1 acres of new impervious surface will be created.

An Operation and Maintenance Plan has been developed for the project, and includes Property and Maintenance, Emergency Response and Unplanned Maintenance, Stand Down Plan for High Wind Conditions, Full Site Visual Inspections and Data Acquisition Systems. These plans have been developed to ensure the array is in proper order year-round.

A Decommissioning Plan has also been developed for the facility and includes the disconnection of the Solar Facility from the electrical grid and the removal of all Solar Facility components including:

Photovoltaic (PV) modules, panel racking and supports;
- Inverter units, transformers, and other electrical equipment;
- Access roads, wiring cables, perimeter fence; and,
- Concrete foundations.

This Decommissioning Plan is based on current best management practices and procedures. The Plan may be subject to revision based on new standards and emergent best management practices at the time of decommissioning. Permits will be obtained as required and notification will be given to stakeholders prior to decommissioning.

The project will be subject to a Zoning Special Use Permit and Building Permit. The project will also require the following Zoning Variances as noted below:

- **Section 143-7.C.(1): Setbacks.** *To provide for at least minimal operational safety for persons and property located outside an SEF, all SEF's shall comply with the following: 1,000 feet from residential property lines*, 200 feet from nonresidential property lines*, highway right-of-way, and maximum height of 20 feet**.*

Setback Variance Request 3: Reduction of 200' setback from nonresidential property line to 50' for a portion of the southeastern property line adjacent to the lands of New York Central Lines, LLC.

Setback Variance Request 4: Reduction of 200' setback from nonresidential property line to 0' for a portion of the northwestern property line adjacent to lands of Michelle Wood, and proposed lands of the Genesee 5 solar array.

Setback Variance Request 5: Reduction of 1,000' setback from residential property lines to 75' for the entirety of the project area.

- **Section 82-4:** *Fence Height limitations in rear, front and side yards. No fence shall be more than six feet in height at the rear yard or side yard of the homes or buildings situated in the Town of Stafford. Get More Power in Less Than 60 Seconds

Optimize your solar array's position to follow the sun's seasonal changes. In seconds you can single-handedly adjust the tilt of the DuraRack AT, maximizing your power production. You'll increase your power by capturing up to 7% more solar energy.*

FAST AND EASY TO INSTALL
A universal mounting system accommodates most modules. DuraTrack™ high-speed mounting clamps make installation fast. The low-profile design means all work is performed at chest height or lower, so it can be done without climbing up and down a ladder.

STURDY AND RELIABLE
Take advantage of utility-proven technology in a system scaled to your needs. The DuraRack AT uses much of the same technology and many of the same parts as Array Technologies' utility scale DuraTrack HZ, and is rated to 90 mph wind loading.

EASILY ADJUSTABLE
It only takes a few seconds to adjust the tilt angle anywhere from flat to 60° using just a cordless drill.

LOW MAINTENANCE
The dry-slide bearings require no lubrication. Just clean your modules regularly to maximize your energy production.

(*Annual average compared to fixed rack installation.)

GENERAL NOTES:

1. PROVIDE A 4800 LB/FT ENCHANCED WOVEN GEOTEXTILE SEPERATION LAYER AND INSTALL PERMANUFACTURER RECOMMENDATIONS INCLUDING OVERLAPS BASED ON SUB GRADE CBR.
2. THE GEOWEB PANELS SHALL BE CONNECTED WITH ATRA KEYS OF EACH INTERLEAF AND END TO END CONNECTION.
3. PROVIDE ATRA ANCHORS TO KEEP PANELS OPEN FOR INFILL AS REQUIRED.
4. GEOWEB INFILL SHALL BE 3/4" TO 1.5" CRUSHED AGGREGATE WITH FINES LIMITED TO LESS THAN 10% TO ALLOW FREE DRAINAGE.
5. LIMIT THE DROP OF INFILL TO PREVENT PANEL DISTORTION.
6. ASSUME HS-20 LOADING.

PERMEABLE ACCESS ROAD GENERAL NOTES:

1. USE OF THIS DETAIL/CRITERION IS LIMITED TO ACCESS ROADS USED ON AN OCCASIONAL BASIS ONLY (I.E. PROVIDE ACCESS FOR MOWING EQUIPMENT REPAIR OR MAINTENANCE, ETC.)
2. LIMITED USE PERVIOUS ACCESS ROAD IS LIMITED TO LOW IMPACT IRREGULAR MAINTENANCE ACCESS ASSOCIATED WITH RENEWABLE ENERGY PROJECTS IN NEW YORK STATE.
3. REMOVE STUMPS, ROCKS AND DEBRIS AS NECESSARY, FILL VOIDS TO MATCH EXISTING NATIVE SOILS AND COMPACTION LEVEL.
4. REMOVED TOPSOIL MAY BE SPREAD IN ADJACENT AREAS AS DIRECTED BY THE PROJECT ENGINEER. COMPACT TO THE DEGREE OF THE NATIVE INSITU SOIL. DO NOT PLACE IN AN AREA THAT IMPEDES STORMWATER DRAINAGE.
5. GRADE ROADWAY, WHERE NECESSARY, TO NATIVE SOIL AND DESIRED ELEVATION. MINOR GRADING FOR CROSS SLOPE CUT AND FILL MAY BE REQUIRED.
6. REMOVE REFUSE SOILS AS DIRECTED BY THE PROJECT ENGINEER. DO NOT PLACE IN AN AREA THAT IMPEDES STORMWATER DRAINAGE.
7. ROADWAY WIDTH TO BE DETERMINED BY CLIENT.
8. THE LIMITED USE PERVIOUS ACCESS ROAD CROSS SLOPE SHALL BE 2% IN MOST CASES AND SHOULD NOT EXCEED 5%. THE LONGITUDINAL SLOPE OF THE ACCESS DRIVE SHOULD NOT EXCEED 15%.
9. LIMITED USE PERVIOUS ACCESS ROAD IS NOT INTENDED TO BE UTILIZED FOR CONSTRUCTION WHICH MAY SUBJECT THE ACCESS TO SEDIMENT TRACKING. THIS SPECIFICATION IS TO BE DEVELOPED FOR POST-CONSTRUCTION USE, SOIL RESTORATION PRACTICES MAY BE APPLICABLE TO RESTORE CONSTRUCTION RELATED COMPACTION TO PRE-EXISTING CONDITIONS AND SHOULD BE VERIFIED BY SOIL PENETROMETER READINGS. THE PENETROMETER READINGS SHALL BE COMPARED TO THE RESPECTIVE RECORDED READINGS TAKEN PRIOR TO CONSTRUCTION. EVERY 100 LINEAR FEET ALONG THE PROPOSED ROADWAY.
10. TO ENSURE THAT SOIL IS NOT TRACKED ONTO THE LIMITED USE PERVIOUS ACCESS ROAD, IT SHALL NOT BE USED BY CONSTRUCTION VEHICLES TRANSPORTING SOIL, FILL MATERIAL, ETC. IF THE LIMITED USE PERVIOUS ACCESS IS COMPLETED DURING INITIAL PHASES OF CONSTRUCTION, A STANDARD NEW YOK STATE STABILIZED CONSTRUCTION ACCESS SHALL BE CONSTRUCTED AND UTILIZED TO REMOVE SEDIMENT FROM CONSTRUCTION VEHICLES AND EQUIPMENT PRIOR TO ENTERING THE LIMITED USE PERVIOUS ACCESS ROAD FROM ANY LOCATION ON, OR OFF SITE. MAINTENANCE OF THE PERVIOUS ACCESS ROAD WILL BE REQUIRED IF SEDIMENT IS OBSERVED WITHIN THE CLEAN STONE.
11. THE LIMITED USE PERVIOUS ACCESS ROAD SHALL NOT BE CONSTRUCTED OR USED UNTIL ALL AREAS SUBJECT TO RUNOFF ONTO THE PERVIOUS ACCESS HAVE ACHIEVED FINAL STABILIZATION.
12. PROJECTS SHOULD AVOID INSTALLATION OF THE LIMITED USE PERVIOUS ACCESS ROAD IN POORLY DRAINED AREAS, HOWEVER IF NO ALTERNATIVE LOCATION IS AVAILABLE, THE PROJECT SHALL UTILIZE WOVEN GEOTEXTILE MATERIAL AS DETAILED IN FOLLOWING NOTES.
13. THE DRAINAGE DITCH IS OFFERED IN THE DETAIL FOR CIRCUMSTANCES WHEN CONCENTRATED FLOW COULD NOT BE AVOIDED. THE INTENTION OF THIS DESIGN IS TO MINIMIZE ALTERATIONS TO HYDROLOGY. HOWEVER WHEN DEALING WITH 5%-15% GRADES NOT PARALLEL TO THE CONTOUR, A ROADSIDE DITCH MAY BE REQUIRED. THE NYS STANDARDS AND SPECIFICATIONS FOR EROSION AND SEDIMENT CONTROLS FOR GRASSED WATERWAYS AND VEGETATED WATERWAYS ARE APPLICABLE FOR SIZING AND STABILIZATION. DIMENSIONS FOR THE GRASSED WATERWAY SPECIFICATION WOULD BE DESIGNED FOR PROJECT SPECIFIC HYDROLOGIC RUNOFF CALCULATIONS, AND A SEPARATE DETAIL FOR THE SPECIFIC GRASSED WATERWAY WOULD BE INCLUDED IN THIS PRACTICE. RUNOFF DISCHARGES WILL BE SUBJECT TO THE OUTLET REQUIREMENTS OF THE REFERENCED STANDARD. INCREASED POST-DEVELOPMENT RUNOFF FROM THE ASSOCIATED ROADSIDE DITCH MAY REQUIRE ADDITIONAL PRACTICES TO ATTENUATE RUNOFF TO PRE-DEVELOPMENT CONDITIONS.
14. IF A ROADSIDE DITCH IS NOT UTILIZED TO CAPTURE RUNOFF FROM THE ACCESS ROAD, THE PERVIOUS ACCESS ROAD WILL HAVE A WELL-ESTABLISHED PERENNIAL VEGETATIVE COVER, WHICH SHALL CONSIST OF UNIFORM VEGETATION (I.E. BUFFER), 20 FEET WIDE AND PARALLEL TO THE DOWN GRADIENT SIDE OF THE ACCESS ROAD. POST-CONSTRUCTION OPERATION AND MAINTENANCE PRACTICES WILL MAINTAIN THIS VEGETATIVE COVER TO ENSURE FINAL STABILIZATION FOR THE LIFE OF THE ACCESS ROAD.
15. THE DESIGN PROFESSIONAL MUST ACCOUNT FOR THE LIMITED USE PERVIOUS ACCESS ROAD IN THEIR SITE ASSESSMENT/HYDROLOGY ANALYSIS. IF THE HYDROLOGY ANALYSIS SHOWS THAT THE HYDROLOGY HAS BEEN ALTERED FROM PRE- TO POST-DEVELOPMENT CONDITIONS (SEE APPENDIX A OF GP-0-20-001 FOR THE DEFINITION OF "ALTER THE HYDROLOGY…"), THE DESIGN MUST INCLUDE THE NECESSARY DETENTION/RETENTION PRACTICES TO ATTENUATE THE RATES (10 AND 100 YEAR EVENTS) TO PRE-DEVELOPMENT CONDITIONS.

GEOGRID MATERIAL NOTES:

1. THE GEOGRID, OR COMPARABLE PRODUCT, IS INTENDED FOR USE FOR ALL CONDITIONS, IN ORDER TO ASSIST IN MATERIAL SEPARATION FROM NATIVE SOILS AND PRESERVE ACCESS LOADS.
2. GRAVEL FILL MATERIAL SHALL CONSIST OF 1-4" CLEAN, DURABLE, SHARP-ANGLED CRUSHED STONE OF UNIFORM QUALITY, MEETING THE SPECIFICATIONS OF NYSDOT ITEM 703-02, SIZE DESIGNATION 3-5 OF TABLE 703-4. STONE MAY BE PLACED IN FRONT OF, AND SPREAD WITH, A TRACKED VEHICLE. GRAVEL SHALL NOT BE COMPACTED.
3. GEOGRID SHALL BE MIRAFI BXG110 OR APPROVED EQUAL. GEOGRID SHALL BE DESIGNED BASED ON EXISTING SOIL CONDITIONS AND PROPOSED HAUL ROAD SLOPES.
4. IF MORE THAN ONE ROLL WIDTH IS REQUIRED, ROLLS SHOULD OVERLAP A MINIMUM OF SIX INCHES.
5. REFER TO MANUFACTURER'S SPECIFICATION FOR PROPER TYING AND CONNECTIONS.
6. LIMITED USE PERVIOUS ACCESS ROAD SHALL BE TOP DRESSED AS REQUIRED WITH ONLY 1-4" CRUSHED STONE MEETING NYSDOT ITEM 703-02 SPECIFICATIONS.

BASIS OF DESIGN: TENCATE MIRAFI BXG110 GEOGRIDS; 365 SOUTH HOLLAND DRIVE, PENDERGRASS, GA; 800-685-9990 OR 706-693-2226; WWW.MIRAFI.COM

GEOWEB MATERIAL NOTES:

1. THE GEOWEB, OR COMPARABLE PRODUCT, IS SUGGESTED FOR USE ON ROAD PROFILES EXCEEDING 10%. THE GEOWEB PRODUCT IS INTENDED TO LIMIT SHIFTING STONE MATERIAL DURING USE.

1. SPECIFIED GEOTEXTILE WILL ONLY BE UTILIZED IN PLACID SOILS. PLACID SOILS CONSIST OF POORLY DRAINED SOILS COMPOSED OF FINELY TEXTURED PARTICLES AND ARE PRONE TO RUTTING. PLACID SOILS ARE TYPICALLY PRESENT IN LOW-LYING AREAS WITH HYDROLOGIC SOILS GROUP (HSG) OF C OR D, OR AS SPECIFIED FROM AN ENVIRONMENTAL SCIENTIST, SOIL SCIENTIST, OR GEOTECHNICAL DATA.
2. THE CONCERN FOR POTENTIAL REDUCTION OF NATIVE INFILTRATION RATES DUE TO THE GEOTEXTILE MATERIAL WOULD NOT BE A SIGNIFICANT CONCERN IN POORLY DRAINED SOILS WHERE SEGREGATION OF PERVIOUS STONE AND NATIVE MATERIALS IS CRUCIAL FOR LONG TERM OPERATION AND MAINTENANCE.

BASIS OF DESIGN: TENCATE MIRAFI RSI-SERIES WOVEN GEOSYNTHETICS; 365 SOUTH HOLLAND DRIVE, PENDERGRASS, GA; 800-685-9990 OR 706-693-2226; WWW.MIRAFI.COM

2. REPLACE, IN ACCORDANCE WITH THE DRAWINGS AND SPECIFICATIONS, ALL PLANTS THAT ARE MISSING, DEAD, OR DO NOT DEVELOP FROM PLANTING STOCK, OR AS DETERMINED BY THE CLIENT ARE IN UNHEALTHY OR UNSIGHTLY CONDITION, AND HAVE LOST THEIR NATURAL SHAPE DUE TO DEAD BRANCHES OR OTHER CAUSES DUE TO THE CONTRACTORS NEGLIGENCE. CONTRACTOR SHALL BEAR THE COST OF COMPLETE REPLACEMENT(S). IN CASE OF ANY QUESTIONS REGARDING THE CONDITION AND SATISFACTORY ESTABLISHMENT OF A REJECTED PLANT, THE LANDSCAPE ARCHITECT'S DECISION IS FINAL. PROVIDE A GUARANTEE FOR ALL REPLACEMENT PLANTS FOR AT LEAST ONE FULL GROWING SEASON.
3. REMOVE AND IMMEDIATELY REPLACE ALL PLANTS, AS DETERMINED BY THE CLIENT TO BE UNSATISFACTORY DURING THE INITIAL PLANTING INSTALLATION.
4. SHRUBS SHALL MEET THE REQUIREMENTS FOR HEIGHT INDICATED IN THE PLANT LIST. THE MEASUREMENTS FOR HEIGHT SHALL BE TAKEN FROM THE GROUND LEVEL TO THE AVERAGE HEIGHT OF THE TOP BRANCHES OF THE PLANT, AND NOT THE LONGEST BRANCH. SINGLE STEMMED OR THIN PLANTS WILL NOT BE ACCEPTED. SIDE BRANCHES SHALL BE GENEROUS, WELL TWIGGED, AND THE PLANT AS A WHOLE WELL SEATED IN THE GROUND. PLANTS SHALL BE IN A MOIST, VIGOROUS CONDITION, FREE FROM DEAD WOOD, BRUISES, OR OTHER ROOT OR BRANCH INJURIES.
5. PLANTED AREAS WILL BE INSPECTED AT COMPLETION OF INSTALLATION AND ACCEPTED SUBJECT TO COMPLIANCE WITH SPECIFIED MATERIALS AND INSTALLATION REQUIREMENTS. INSPECTION TO DETERMINE FINAL ACCEPTANCE OF PLANTED AREAS WILL BE MADE BY THE CLIENT UPON CONTRACTORS REQUEST. PROVIDE NOTIFICATION AT LEAST 10 WORKING DAYS BEFORE REQUESTED INSPECTION DATE. PLANTED AREAS WILL BE ACCEPTED PROVIDED ALL MATERIALS ARE ALIVE AND IN A HEALTHY, VIGOROUS CONDITION. UPON FINAL ACCEPTANCE, THE OWNER WILL ASSUME MAINTENANCE.
6. A ONE YEAR GUARANTEE SHALL BE PROVIDED FOR ALL NEW AND RELOCATED PLANT MATERIALS FROM DATE OF FINAL ACCEPTANCE TO THE OWNER.
7. THE CONTRACTOR SHALL BE RESPONSIBLE FOR HIS OWN QUANTITY TAKEOFF.

Property Maintenance and Housekeeping

- Observation and review of the property and planting buffer to include tree, vegetation and grass trimming to prevent obstruction of the solar arrays as well as access and egress of the site.
- Clearing of snow on an as-needed basis in and around the electrical equipment requiring inspections. Access roads should be plowed when ground snow level is 6 inches or greater.
- Inspection of access road checking for sediment buildup, drainage issues, rutting and other failures.
- Inspection of stormwater practices as outlined in the SWPPP.

Emergency Response and Unplanned Maintenance

Monitoring

- Using the Data Acquisition System (DAS), monitor daily, the day-to-day system output and performance. Ensure 98% availability of system. Low performance strings for a period of 30 days would trigger investigation. Low performance inverters for a period of 1 week would trigger investigation. Unjustified low performance of the site would trigger immediate investigation.
- Setup alarm point for abnormal system behavior including any inverter shutdowns and protection tripping. These alarms would prompt immediate dispatch to investigate, remediate and place back in service.

Unplanned maintenance

- 24-hour response to alarms to identify and document failures.
- Coordination with utility and other authorities, as necessary.
- Troubleshoot issues and document details of testing or performance maintenance work, create a remediation plan if issue cannot be solved during first response.
- Make and coordinate claims for reimbursement and/or replacement under any available warranty from manufacturers, installers or other similar entities relating to the System.

Stand Down Plan for High Wind Conditions

- Site specific wind analysis will be performed on-site prior to tracker racking design.
- Array Tracker racking systems will include 24/7 wind sensory data to measure wind speed and wind direction in real-time.
- Tracker systems will include NEXTracker fasteners or approved equal.
- At high wind speeds, a High Stow angle will be pre-programmed into the tracking system, thereby reducing wind vortex and decreasing wind instability during high-wind events.
- Battery-backer controllers will be utilized to activate racking stow in the event power from the grid is currently unavailable.
- Upon activation of High Stow Angle, a Full Site Visual inspection will be performed.

Full Site Visual Inspection

PV Panel Condition

- Inspect for cleanliness, cracked/chipped/scratched/ shattered panels, fading/discoloration, burn marks, seal condition, frame damage or rust

PV Mounting Structure

- Inspect mounts and mounting structures (loose panels, loose rack/clips missing hardware, rusted bolts, flashing issues, ballast condition, rack anchor condition)

PV Array Ventilation

- Inspect conditions under panels, remove of any large debris or pests; visual check to ensure maximum ventilation under panels

PV System Foundations

- Ground mount arrays (visual inspection of grounds and vegetation, identify issues related to mud, water pooling, soil erosion)

Balance of System

- Inspect conduit runs (separated/cracked conduits, misaligned wire runs)
- Inspect panel interconnectivity and string lines (wire/cable wear, wire fading, chewed wire due to pests, identify loose/detached wires)
- Inspect junction/combiner enclosure(s) condition (seals, rust, damage, locks)
- Inspect electrical equipment enclosure(s) (seals, rust, damage, door condition, locks, equipment pad(s))

Inverter(s)

- Inspect inverter structure(s) and enclosure(s) (seals, rust, damage, door condition, switch/handle condition, locks)
- Inspect inverter equipment pad(s) (cracks, base damage, soil erosion)

Data Acquisition System (DAS)

Weather Station Condition (alignment of irradiance sensor, condition of wind and temperature meters)

- DAS device condition (screen, seals, rust, damage)

Shading Conditions

- Visual inspection to identify any shading issues, preventive care if shading caused by nearby vegetation)

System Security

- Visually inspect fence line or confinement structures for wear, damage, breach, vandalism, or problems
- Visually inspect any electronic surveillance equipment (cameras, alarms, etc.) and identify if operating.
- Check condition of any locks, chains or other protection measures preventing unauthorized access to the system.

Reports

- Document all deficiencies and classify as “continue to monitor”, “recommended to repair/replace”, or “unsafe condition”. Immediately notify and properly secure/remediate any hazard.

Inverter Preventative Maintenance

- Conduct preventative maintenance in accordance with manufacturer specifications.
- Clean and vacuum enclosure, vents and heat sink / remove any identifiable debris and clean any accumulation of dust.
- Change air filters according to manufacturer specifications (filters are billed at cost, installation is included in O&M fees)
- Check fuses and switchboards (visually inspect for signs of corrosion/burning of components)
- Check wiring (visually inspect for breaks, deterioration, or signs of corrosion/burning, check cable wire protection)

String Level Voc, DC Operating Current

- Perform testing to measure the open circuit voltage (Voc) and operating current of each string in the system.
- Analyze and document any anomalies that effect system performance and propose correct actions if necessary.

String Level IV Curve Tracing

- Perform string level IV Curve tracing with a minimum of 400 w/m2 irradiance.
- Analyze and document any anomalies that effect system performance and propose correct actions if necessary.

Module Level IR Drone Imaging and Analysis (can replace IV curve tracing)

- Perform drone IR scan and desktop analysis to identify all module, string, connection, or DC bus issues.
- Replace and module operating less than 30% of expected rating. Repair all underperforming strings.
-

Thermal Imaging Combiners, Inverters and Disconnects

- Thermal imaging of combiners, inverters and disconnects by a trained thermographer.
- Analyze and document all images taken, identify any potential hot spots and propose correct actions if necessary.

Typical Annual Maintenance Scope of Service with Contractor

Item	Service Description	Frequency / Response Time
1.	Monitoring of the Facility from a control point through internet connection. CONTRACTOR shall be responsible for the setup of alarm points for abnormal inverter shutdowns / faults.	Daily
2.	Remote troubleshooting of inverter / system faults and remote inverter resets when the fault is understood.	Daily as needed. Initial response: Same day
3.	Troubleshooting of inverter / system faults, with on-site response when the troubleshooting cannot be accomplished remotely. This extends past inverter issues to include open circuit, shorted cabling, opened/blown fuse scenarios, and grounding issues. Prior to site visits by CONTRACTOR or CONTRACTOR Subcontractors, clear and safe access to the array and PV equipment must be provided by others, including, but not limited to, vegetation removal, and gate and fence maintenance as needed. Introduction

NY CDG Genesee 6, LLC proposes to build a ground mounted photovoltaic (PV) solar facility located at 8244 Batavia-Stafford Townline Road, Batavia, NY 14020. The project parcel is located in the Town of Stafford, tax parcels 01-02-117.1 and 01-02-115, both owned by Michelle Wood. The facility will be connected to the local electrical grid and have a capacity of approximately five (5.0) megawatts (MW) alternating current (AC).

The site is proposed to occupy approximately 28.32 acres of a 127.5-acre parcel area (Parcel 01-02-117.1 = 64.57 Acres, Parcel 01-02-115 = 62.92 Acres). The site plan has been designed to minimize impact to Federally Regulated Wetlands. No New York State Department of Environmental Conservation Wetlands and buffer areas appear on-site. The installation will be 5MW AC based on approximately 676 free standing, tracking, solar tables consisting of roughly 13,520 modules. There will be electrical collection systems including cabling and protection devices to enable the collection of power to a main inverter/transformer station near one of the sites entrances.

This Decommission Plan provides a description of decommissioning and restoration of a 5.0 MW Community Solar project in the Town of Stafford, NY. Start of Construction is planned for 2022 or 2023. The project will consist of perimeter fencing, solar arrays, single axis tracking racking structures and foundations, inverters, electrical collection system and gravel access roads.

Proposed facilities are predominantly on agricultural land. The project area will have minimal to no ground disturbance. The terrain is relatively flat and the project avoids wetlands, waterways and drainage ditches to the extent practicable.

This plan assumes that the solar facility will have a maturity date of thirty five (35) years. This plan will be reviewed and revised at the start of construction, and every 5 years to confirm that the value is still adequate and be revised if any discrepancies arise. The plan will need to be completely redone should there be an opportunity to extend the life or repower.

After the large-scale solar energy system is no longer in use, it shall be removed by the applicant or any subsequent owner.

Any subsequent transfers of the solar facility and/or the real property from the date of the site plan approval shall be conditioned on the transferee agreeing to be held responsible and liable for the decommissioning plan.

Decommissioning of the Solar Facility will include the disconnection of the Solar Facility from the electrical grid and the removal of all Solar Facility components including:

- Photovoltaic (PV) modules, panel racking and supports;
- Inverter units, transformers, and other electrical equipment;
- Access roads, wiring cables, perimeter fence; and,
- Concrete foundations.

This Decommissioning Plan is based on current best management practices and procedures. The Plan may be subject to revision based on new standards and emergent best management practices at the time of decommissioning. Permits will be obtained as required and notification will be given to stakeholders prior to decommissioning.

Decommissioning of the Solar Facility

Decommissioning will occur as a result of any of the following conditions:

1. That NY CDG Genesee 5, LLC or any entity that may own or operate the facility in the future decides to retire the Solar Facility;
2. The system is not completed and functioning within 18 months from the issuance of site plan approval and/or the issuance of a building permit;
3. The system generates no electricity for a period of three (3) consecutive months;
4. The system is damaged and will not be repaired or replaced
5. Upon cessation of activity of a constructed facility for a period of thirty (30) consecutive days;
6. Any failures to meet obligations of the lease, local and utility regulations, or law.

The Town of Stafford Code Enforcement Officer, Supervisor, Clerk, and Town and Planning Boards, as well as NYSEG and the land owner will be notified via certified mail if decommissioning and removal of the system is required.

As the Owner will file a Notice of Intent to the New York State Department of Agriculture and Markets ("NYSDAM"), the Owner will notify and coordinate action with NYSDAM, as well. As required with the scope of the process, the Owner may have to seek permits with the Town, the New York State Department of Environmental Conservation ("NYSDEC") for any future-day SPDES stormwater management requirements, and the United States Army Corps of Engineers ("USACE") for any concerns governing the Waters of the United States. Once notices and permits are obtained, the Owner and its contractors can move to perform the action.

It is important to realize that the probability of early an early decommissioning event that would lead to abandonment or long-term interruption is extremely low during the first 20 years of the Project life due to:

- Sophisticated financing and tax equity partners
- Equipment warranties
- Insurance and business interruption insurance for unforeseen failures
- Operations and maintenance planning
- Creation of a major equipment reserve fund for equipment failures
- Replacement costs declining steadily.

Based on this, NY CDG Genesee 5, LLC slowly builds a cash reserve from the revenue starting in year 15 although as stated above, this will be re-evaluated regularly.

The activities involved in decommissioning the projects include disassembly and removal of all infrastructure (solar modules, racking, tracking system, inverters, transformers, foundations, etc.), and the remediation of soil and vegetation shall be conducted to return the site to a useful and nonhazardous condition and shall include but not be limited to the following:

- Removal of above ground and belowground equipment, structures and foundations.
- Restoration of the surface grade and soil after removal of equipment.
- Revegetation of restored soil areas with native seed mixes, excluding any invasive species.
- A time frame for the completion of the site restoration work.
- A cost estimate detailing the projected cost prepared by a professional engineer or contractor; and cost estimates shall take into account inflation.

Decommissioning is expected to take 6-9 months and not occur during winter months.

The anticipated sequence of decommissioning and removal is described below:

- Reinforce access roads, if needed, and prepare site for component removal
- Install temporary fencing if required to ensure safety
- De-energize solar arrays, open all disconnections and have a qualified electrician disconnection all terminated cables.
- Remove panels and dismantle racking for recovery / disposal
- Remove structural foundations
- Remove inverters and transformers
- Remove electrical cables and conduits
- Remove access and internal roads
- De-compact subsoils (if required), restore and revegetate disturbed land to pre-construction conditions to the extent practicable

Decommissioning Costs

Per Town Law, the Owner is obligated to provide security the cost of removal while accounting for inflation.

The Owner will provide a bond for $236,160 upon application for building and electrical permits within the Town. The Owner proposes to post the security at the time of application for a building permit. After every year of operation, NY CDG Genesee 5, LLC, or the future owner-operator will increase the bond amount 3.0% of the previous balance to keep up with inflation and expected decommissioning costs.

The decommissioning bond/surety shall be in place for the full life of the project (35 years) plus additional 18 months to cover the decommissioning period to allow the site to be fully stabilized. The bond shall be removed once the decommissioning is complete. In the event the decommissioning is not completed within 12 months of the end of the land lease (conditions stated above), the town may draw on the bond to complete the decommissioning work.

The Decommissioning Plan will be required to be accepted by the Town Board, filed with the Clerk and recorded in the Genesee County Clerks's Office prior to issuance of a permit. The Town reserves the right to review the decommissioning estimate every 5 years to confirm that the value is still adequate and request the value be revised if any discrepancies arise.

The decommissioning cost is based on best available information but is subject to change over the lifetime of the facility depending on future economic and industry conditions. Economic conditions such as inflation could increase costs; however, improvements in industry practices such as automation could decrease costs. The estimate provided applies only to current economic and industry conditions and does not consider future valuations. The estimate will be required to be accepted by the Town Board and filed with the Clerk prior to issuance of a permit. The Town reserves the right to make any agreements regarding the decommissioning bond/surety and review the decommissioning estimate

every 5 years to confirm that the value is still adequate and request the value be revised if any discrepancies arise.

This cost estimate does not include the salvage value of the decommissioned equipment. All material which is not salvageable will be recycled with an industry-recognized leader. While PV recycling technology is a relatively new technology, it has greatly progressed in recent years. Costs shown are based on recent contactor experience with similar undertakings.
